## DIGESTATE AND SLURRY MANAGEMENT

### MOUNTED & TRAILED HOSE REELERS

TRAMSPREAD hose reelers have been developed to meet the demanding requirements of professional agricultural contractors and progressive farmers. Designed for efficiency in high-output umbilical systems, they combine heavy-duty construction with practical, operator-focused features to deliver dependable performance season after season.

The range includes both mounted and trailed models, providing flexibility to suit different operational systems and working conditions. A key feature of the TRAMSPREAD mounted reelers is the use of galvanised detachable spools, designed for quick and safe removal from the reeler frame. This system allows one heavy-duty frame to service multiple spools, increasing efficiency, reducing equipment investment and enabling rapid turnaround between jobs.

Built to uncompromising standards throughout, TRAMSPREAD hose reelers are engineered to provide long service life, straightforward operation and the durability required for modern slurry and digestate application.

## MOUNTED RANDOM WRAP HOSE REELERS

TRAMSPREAD mounted 600m, 1000m and 1400m random-wrap hose reels are designed for front and rear use. All feature galvanised detachable spools that are quickly removed from the heavy-duty linkage frame by withdrawing two securing pins, lowering the spool to the ground and driving away. One frame can therefore serve multiple spools. A large central trough in each spool is used for easy location of the drag hose couplings.

The 600m model uses a heavy-duty hydraulic motor and gear drive for positive, controlled hose laying and recovery without overrun. A large toolbox is included. The 1000m and 1400m models feature strengthened spools and reinforced linkage frames, with twin hydraulic motors providing additional recovery power for longer hose lengths. Twin toolboxes, one on each side, offer convenient storage.

The 1000m spool holds up to 1000m of 4" or 5" drag hose, or 600m of 6" hose, with optional partitions allowing mixed hose loads. The 1400m spool holds up to 1400m of 4" or 5" hose, or 1000m of 6" hose.

Options:

- 1000m and 1400m extra heavy-duty galvanised spool
- Galvanised protection and light bar (1000m and 1400m)
- Full lighting kit: head/side/indicator lights, plus LED work lights
- Galvanised retrofit spool partitions

## TRAILED HOSE REELERS

TRAMSPREAD offers both segmented and random-wrap 2000m trailed reelers. Both use twin hydraulic motors and are fitted with a sprung 40kph axle with hydraulic brakes, 500/60-22.5 tyres, mudguards and road lights. The heavy-duty chassis features a long drawbar, allowing the tractor to also carry a dribble bar.

The segmented reeler has a full-width roller and guide bobbin. The galvanised 2000m spool is divided into five 400m segments.

The random-wrap model has a hydraulically pivoting drawbar to aid even loading of the spool. The heavy-duty galvanised spool can hold 2000m of 6" hose, 2400m of 5" hose or 2800m of 4" hose. A large toolbox is provided for stowing couplings and ancillaries.
